

What are Household Hazardous Wastes?

Household Hazardous Wastes (HHW) are leftover products containing ingredients that are flammable, corrosive, reactive or toxic. Home improvement products, household cleaners and automotive fluids are potentially dangerous to our health and the environment if stored or disposed of improperly.

To determine if a product is hazardous, read the label. Look for words that signal hazardous ingredients like "Danger, Poison, Flammable, Corrosive or Warning".

Reduce the amount of dangerous products that enter your home by buying only what you need and choosing less toxic alternatives when available. If you have extra, share with a friend or neighbor who may have use for your leftover paint, cleaning supplies or lawn and garden products.

Even with the best of efforts, there are sometimes leftovers that need to be disposed of. The City of Salina's Household Hazardous Waste Facility will safely recycle or dispose of HHW from residences in Saline, Ellsworth, Ottawa and Lincoln counties. Call for more information and weekly drop off limits.
